ABOUT PLUTORA:

Named a Strong Performer in the Forrester Wave™: Value Stream Management report, Plutora has helped companies like Telefonica, QBE and Healthfirst streamline their software delivery process.

"Plutora helped us produce 11 enterprise releases this year—up from 4 major and 4 minor releases 2 years ago—with only half the staff."

Suzanne Murray, Enterprise Release Manager, AMP

Release Management QuickStart Capabilities

A dashboard and report of value delivered to the business	✓
A dashboard and report showing initiative status with drill down into EPICs, Features, and Stories	✓
Flexible analytics across the end-to-end lifecycle of releases	✓
Templating of release cadences with phases, gates, activity and criteria	✓
Integration with Jira releases and user stories so you know what's coming	✓
Facilitates slotting of production deployments so you can manage schedule and calendar dependencies of Dev and Ops as well as block out periods	✓
Show dependencies between releases, applications, and scope	✓
Capture and report on release activity for compliance audits	✓
Automated notifications to team members when action is required	✓
Manage the release intake process for regular, agile releases	✓
Manage the stakeholders of systems and releases	✓
Automated reports for metrics like Deployment Frequency, Lead Time, Failure Rate, and Mean Time to Recover	Partial*
Manage risk with real-time release dashboards showing statuses on governance, compliance, user stories, testing progress and defect status	Partial*
Automated report for the CAB that presents all data needed to evaluate fitness for production	Partial*

* May require additional integration

Capture environment configuration by integration into the appropriate tool (CMDB, CI/CD, etc.)	✓
Visualizations of the dependencies between environments	✓
Handle booking and change requests while avoiding and resolving conflicts with workflows	✓
An environment schedule for full real-time visibility	✓
Track environment health and automatically generate uptime reports trended over time	✓
View all environment information for analysis and utilization	✓
Capture all environment changes and bookings to generate metrics by team over time	✓
Automated notifications to team members when action is required	✓
Integrate with deployment tools and automatically pick up the new version	✓
Manage the stakeholders of systems and environments	✓
Bulk uploads	Partial
